

Muhammad Sarmad Javed

Full Stack Developer

✉ sarmadofficial.6@gmail.com ☎ +92 328 7900729 📍 Lahore, Pakistan 🔗 /imsarmadjaved 🌐 /imsarmadjaved
🔗 Portfolio

Summary

AI-driven **Full Stack Developer** specializing in MERN stack with a strong focus on AI-enhanced web applications. Combining robust backend architecture with intelligent features to build high-performance, scalable solutions. Proven ability to reduce load times while delivering clean, maintainable code that solves real business problems through **api development**, **testing**, and **security** focused implementation.

Professional Experience

02/2026 – 04/2026 Lahore, Punjab, Pakistan	Amrood Labs <i>MERN Stack Developer Intern</i> - Engineered responsive MERN applications, achieving reduction in page-load times through performance optimization and efficiency improvements - Developed and integrated RESTful APIs using Node.js and Express.js, connecting frontend applications with backend services, ensuring smooth data flow and reliable implementation - Ensured cross-browser compatibility and mobile responsiveness across all projects using testing and technical troubleshooting - Performed code review and collaborated on technical discussion to improve maintainability, version control, and supportability - Leveraged AI-assisted coding tools to accelerate development workflow while maintaining responsibility for maintenance and management of changes
--	---

EDUCATION

04/2022 – 01/2026 Lahore, Pakistan	Bachelor's in Computer Science <i>University of South Asia</i> CGPA: 3.83 / 4.0
---------------------------------------	--

SKILLS

Frontend HTML5 CSS3 JavaScript TypeScript React.js Next.js Responsive Design	AI & Developer Tools FastAPI API-based AI Integrations ChatGPT Prompt Engineering
Backend Node.js Express.js Python Java REST APIs API Integration MVC Architecture JWT Authentication	Tools / Platforms Git GitHub Postman VS Code Cloudinary Vercel
Databases (SQL / NoSQL) MongoDB PostgreSQL SQL NoSQL	Soft Skills Teamwork Communication Agile Collaboration Troubleshooting

PROJECTS

NexTrade 🔗 <i>AI-Enhanced Digital Marketplace for Wholesale Trading</i> Tech: MERN Stack • Python • Cloudinary - Architected a comprehensive B2B digital marketplace with intelligent product and ads recommendation engine. - Designed scalable REST APIs following MVC architecture for clean code organization, with versioning practices to support iterative releases. - Integrated Cloudinary for optimized image handling and delivery, improving efficiency and overall user experience - Enhanced database performance through strategic query optimization and database management improvements AI Highlight: Implemented smart recommendation algorithms boosting user engagement through implementation of ranking logic.
RAG Resume System 🔗 <i>AI-Powered Resume Analysis & Recruitment Platform</i> Tech: Next.js • Python • Pinecone • MongoDB • OpenAI - Built AI-powered resume analysis platform with FastAPI, Next.js, Pinecone, and OpenAI, focusing on supportability and reliable maintenance - Implemented RAG pipeline: PDF extraction → chunking → vector embeddings → semantic search with testing for pipeline correctness - Built multi-candidate recruiter search with skill matching and scoring algorithm, ensuring clear communication of results through structured writing - Deployed serverless backend on Vercel with MongoDB Atlas and serverless functions, applying git-based version control and release discipline
